

INTRODUCING FACE MIX

At Kilsaran our aim is to provide innovative and sustainable paving solutions for our customers. We are delighted to introduce our Face Mix innovation to the market. Face Mix increases the durability and sustainability of our paving products by increasing the concentration of cement and pigmentation on the surface layer, while increasing the recycled content of the base layer. We can now achieve a more durable paving block with stronger colours and a reduced carbon footprint.

- **Surface Layer:** Minimum 4mm layer with superior fine aggregates, higher cement content and a greater concentration of pigment
- **Base Layer:** Larger aggregate concrete for high tensile splitting strength

Benefits of Face Mix

1. Sustainability

- Reduction of carbon footprint
- Up to 15% of recycled aggregates used in high-quality base layer

2. Durability

- Improved resistance to wear and tear, weathering and abrasion
- Compressive strength and longevity
- Exceptionally hard wearing in high trafficked areas

3. Aesthetics

- Vivid, brighter and long-lasting colour
- Smooth refined surface
