Photographer: Gareth Byrne Photography

White Stacks is a striking contemporary home that reinterprets the traditional Irish tower house in a bold, modern form. Perched on Killiney Hill, the residence is rooted in its dramatic coastal landscape while embracing panoramic views from every level. Concrete was the defining material of this project, chosen for its strength, simplicity, and performance and used with exceptional sensitivity to create a home that is both robust and refined.

Striking concrete columns greet visitors at the driveway, setting the tone for the material palette within. Inside, exposed concrete elements integrate seamlessly, creating a beautiful interplay between the rawness of concrete and the warmth of natural textures. Every detail from slabs and columns to floor screeds and even the kitchen counter expresses the material's honesty and strength.
